

安装 Ubuntu: 项目在 Ubuntu 16.04 (ROS Kinetic) 和 18.04 (ROS Melodic) 上进行了测试。这里我选用了 Ubuntu 18.04 操作。

## WSL(Windows Subsystem Linux)的安装

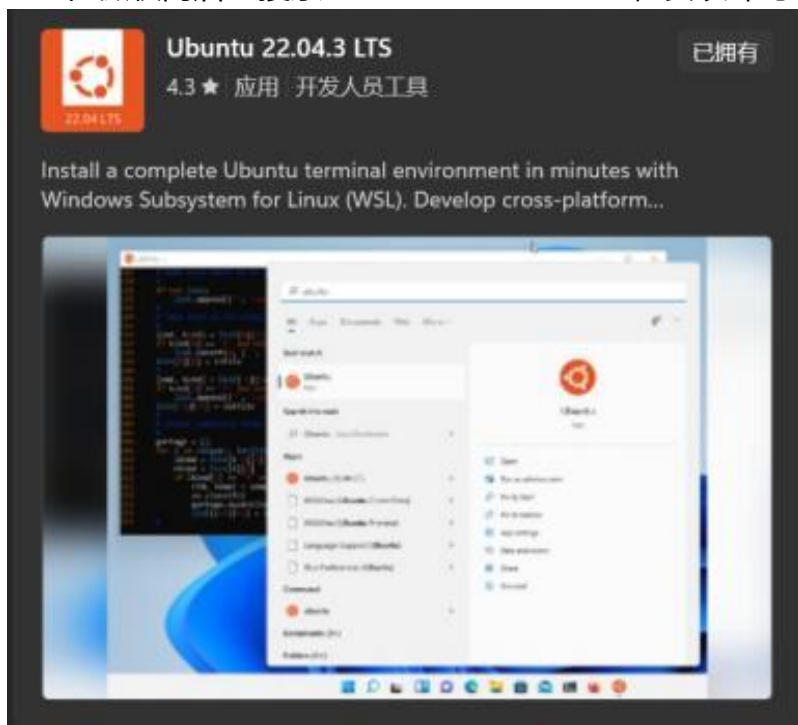

1. 在系统 BIOS 中打开 CPU 虚拟化技术 (Intel Virtual Technology 或 SVM)
2. 在系统搜索栏中搜索“启用或关闭 Windows 功能”，并打开以下选项

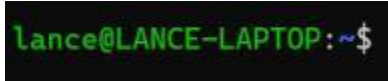

3. 在官网下载最新的 WSL2 Linux 内核升级。用管理员身份打开终端，输入：

```
wsl .exe --update
```

4. 在微软商店里搜索 Ubuntu 22.04.X LTS，安装即可

5.进行基本的 Ubuntu 配置，看到 `[设置用户名]@设备名:~$` 即为成功

6.换国内镜像源，更新 apt 库

备份原本的 source.list文件

```
sudo cp /etc/apt/sources.list /etc/apt/sources.list.bkup
```

在 vim 的输入模式下 (运行 `sudo vim /etc/apt/sources.list`) 并将下面新的镜像源网站粘贴进 source.list文件中，并通过 `:wq` 保存退出。

```
# 默认注释了源码镜像以提高 apt update 速度，如有需要可自行取消注释 deb
https://mirrors.tuna.tsinghua.edu.cn/ubuntu/ jammy m
# deb-src https://mirrors.tuna.tsinghua.edu.cn/ubuntu/ j deb
https://mirrors.tuna.tsinghua.edu.cn/ubuntu/ jammy-u
# deb-src https://mirrors.tuna.tsinghua.edu.cn/ubuntu/ j deb
https://mirrors.tuna.tsinghua.edu.cn/ubuntu/ jammy-b
```

分别运行 `sudo apt update` 和 `sudo apt upgrade`

安装依赖: 需要安装一些必要的工具。通过运行以下命令来安装 libarmadillo 库和 ROS 的 nlopt 包:

```
liu@LAPTOP-G5I4C2UR:~$ sudo apt-get install libarmadillo-dev ros-melodic-nlopt
[sudo] password for liu:
Reading package lists... Done
Building dependency tree
Reading state information... Done
libarmadillo-dev is already the newest version (1:8.400.0+dfsg-2).
ros-melodic-nlopt is already the newest version (2.1.24-2bionic.20230621.131609).
0 upgraded, 0 newly installed, 0 to remove and 0 not upgraded.
```

克隆 FUEL 项目: 进入到你的 ROS 工作空间的 src 目录, 然后克隆 FUEL 项目的代码库 (这里使用的是 SSH 方式):

```
cd ${YOUR_WORKSPACE_PATH}/src
git clone git@github.com:HKUST-Aerial-Robotics/FUEL.git
cd ..
```

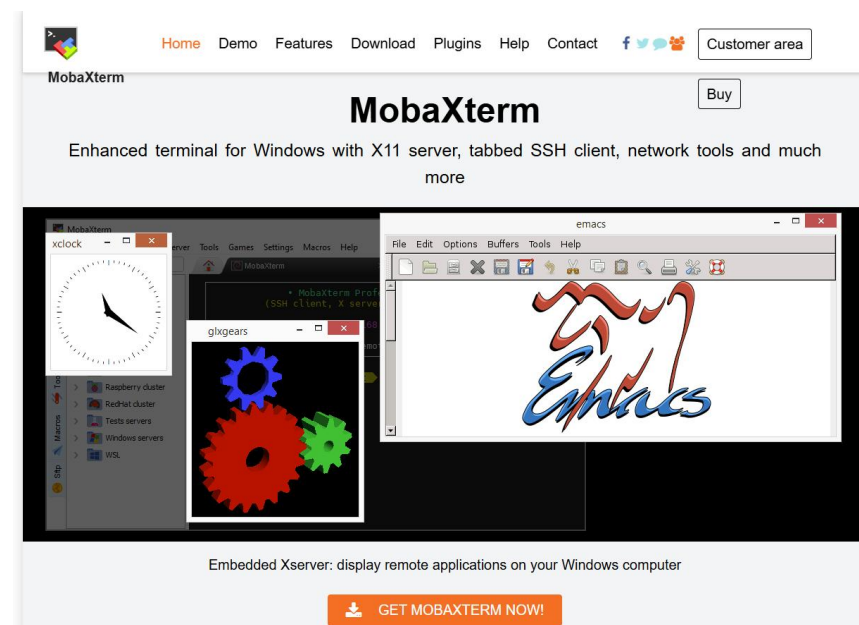

编译项目: 使用 `catkin_make` 命令来编译项目:

```
liu@LAPTOP-G5I4C2UR:~/FUEL$ catkin_make
Base path: /home/liu/FUEL
Source space: /home/liu/FUEL/src
Build space: /home/liu/FUEL/build
Devel space: /home/liu/FUEL/devel
Install space: /home/liu/FUEL/install
Creating symlink "/home/liu/FUEL/src/CMakelists.txt" pointing to "/opt/ros/melodic/share/catkin/cmake/toplevel.cmake"
####
#### Running command: "cmake /home/liu/FUEL/src -DCATKIN_DEVEL_PREFIX=/home/liu/FUEL/devel -DCMAKE_INSTALL_PREFIX=/home/liu/FUEL/install -G Unix Makefiles"
in "/home/liu/FUEL/build"
####

```

启动可视化工具: 编译完成后, 可以通过运行以下命令来启动 Rviz, 用于可视化探索过程:

**Error:**Could not connect to any X display.

```
QStandardPaths: XDG_RUNTIME_DIR not set, defaulting to '/tmp/runtime-liu'
qt.qpa.screen: QXcbConnection: Could not connect to display
Could not connect to any X display.

#### 补充说明：

解决XDG\_RUNTIME\_DIR未设置的问题

当您遇到 XDG\_RUNTIME\_DIR not set, defaulting to '/tmp/runtime-root' 这个警告时，通常意味着您的系统缺少必要的环境变量来指定 XDG\_RUNTIME\_DIR 的位置。这个环境变量用于存放临时文件和运行时数据，对于许多图形界面应用程序来说是非常重要的。

#### 解决方法：

方法一： **设置环境变量**：终端输入export XDG\_RUNTIME\_DIR=/usr/lib/

方法二：在/etc/profile末尾增加两句

```

1 export XDG_RUNTIME_DIR=/usr/lib/
2 export RUNLEVEL=3

```

复制

然后刷新全局变量

```

1 source /etc/profile

```

方法三：如果你的程序没有中断或严重BUG，那么该警告记录：

QStandardPaths: XDG\_RUNTIME\_DIR not set, defaulting to '/tmp/runtime-root'好像并不影响页面显示和程序的正常运行。

**Error:**wrong ownership on runtime directory /usr/lib/,0 instead of 1000

```

process[rvizvisualisation-1]: started with pid [8698]
